Modal logic is, strictly speaking, the study of the deductive behavior of the expressions "it is necessary that" and "it is possible that". However, the term "modal logic" may be used more broadly for a family of related systems. These include logics for belief, for tense and other temporal expressions, for the deontic (moral) expressions such as "it is obligatory that" and ...

Positive first-order logic on words Denis Kuperberg January 7, 2021 Abstract We study FO+, a fragment of first-order logic on finite words, where monadic predicates can only appear positively. We show that there is a FO-decidable language that is monotone in monadic predicates but not decidable in FO+. This provides a simple proof that Lyndon's preservation theorem fails on finite structures. We ...

If you can sense that they mean the question in a bad way this is, probably the best answer: "I've got more logic than you." That should draw their attention away and realize that you are not a person to be messed with. If you want to be polite then say, "Why do you ask?" It's all up to you to decide which is the best answer for you: the former or latter. If your classmates ask it in a friendly ...

It has been observed that "not only does the disease theory of alcoholism fail to correspond with mainstream medicine's concept of a disease, but alcoholism itself resists medical intervention." 54 Using a faulty theory and the "treatment" that flows from it is a recipe for failure. AA's self-claimed success rate of 5% represents a failure because about one-third of alcoholics ...
